

Tutorial 1 – Clinical Case Discussions

DENT5311 Paediatric Dentistry

Dr Lisa Bowdin

Instructions:

Review the accompanying slides before the tutorial.

For each case:

- Identify the key findings, including the patient's dental age
- Develop a problem list
- Formulate differential diagnoses where appropriate
- Consider any additional investigations required
- Develop a management plan and justify your decisions.

Dot point answers are acceptable. Be prepared to discuss your reasoning during the tutorial.

Suggested Approach:

1. Describe the image/radiograph.
2. Identify relevant soft tissue findings.
3. Identify relevant hard tissue findings.
4. Estimate the patient's dental age.
5. Develop a problem list.
6. Formulate differential diagnoses.
7. Consider additional investigations.
8. Develop a management plan.

- Grey discoloration of 61
- dx
 - ↳ pulp necrosis
 - ↳ abutment
 - ↳ trauma
- management
 - ↳ fracture
 - ↳ changed
 - ↳ Trauma series

Case 1:

LHs BW

Case 2:

- frontal clinica)
- white spot lesions
- 62: DM 6
- midlines not aligned
- Supernumerary in Q 5
- age = 3-5

Case 3:

R

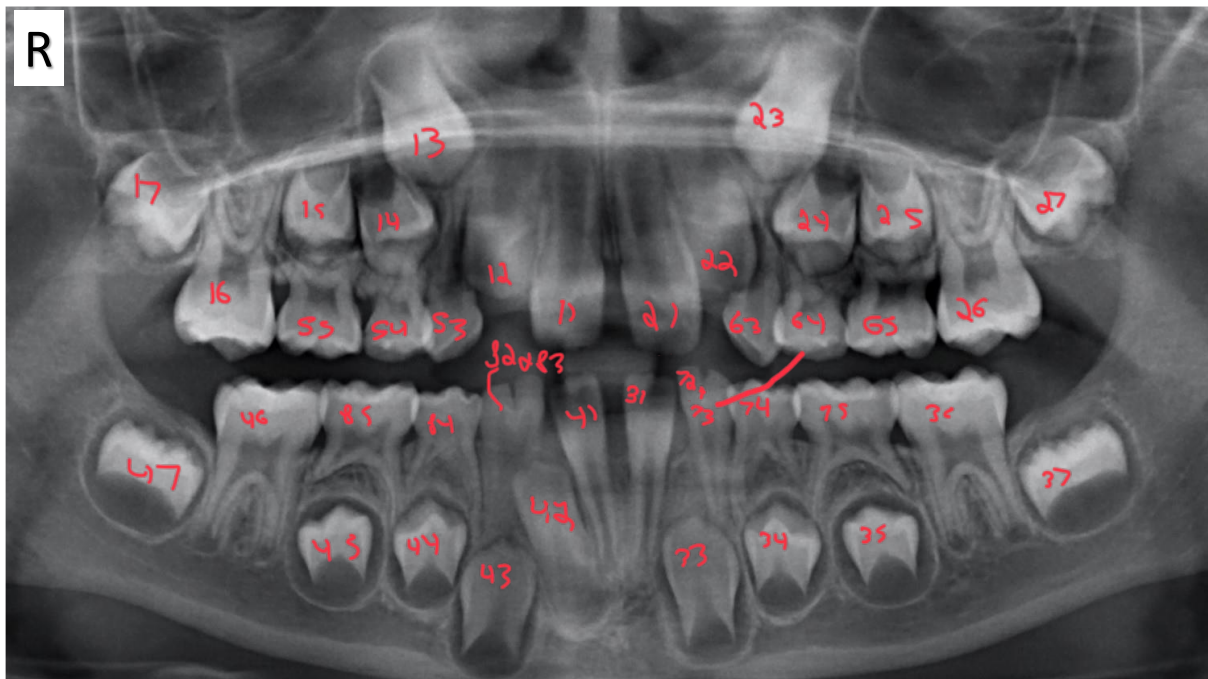

Went downcut & yellow spalling

Case 4:

Case 5:

Case 6:
